SUMMARY

Automation developer who turns manual processes into workflows that run on their own. At the Municipal Department of Education of Planaltina-GO (a 46-unit public network), I built data extractors and converters that cut spreadsheet processes from **3–4 months to 5–6 days**, and rebuilt the staffing spreadsheet now used by **46 units (43 schools and 3 daycare centers) and HR**. I build **self-hosted n8n workflows with AI agents**, WhatsApp and API integrations, published and documented on GitHub. I also lead EducalA, an AI education program in 12 public schools.

SKILLS

Automation & AI: n8n (self-hosted, sub-workflows as agent *tools*, JavaScript Code nodes, cron and webhooks), LLMs (Gemini API, Claude), prompt engineering, Evolution API (WhatsApp).

Integration & data: REST APIs, webhooks, Python (pandas, openpyxl), spreadsheet ETL, SQL (SQLite, MySQL), advanced Excel and Google Sheets.

Infra & development: Docker and Docker Compose, Linux and shell scripting, Git/GitHub, Django, Node.js/Express, AI-assisted development (Claude Code).

EXPERIENCE

Secretary (working in IT, automation & data)

May 2025 – present

Municipal Department of Education, Planaltina-GO — Technology Center (NTM)

- Built bulk data extractors and converters in Python across spreadsheets: processes that took **3–4 months now take 5–6 days**.
- Rebuilt the network's staffing spreadsheet from scratch, adopted by **46 units (43 schools and 3 daycare centers) and HR**; data comes out consolidated at extraction time, with no manual merging.
- Built **daemon@ntm**, an internal system (Django, Ubuntu server) that centralizes IT service orders, with several orders opened per day and **6 team members** using it; asset inventory module being rolled out.
- Built the SCM+ converter (macro-free HTML app) for enrolling students and teachers at school offices.
- Lead **EducalA**: AI education in **12 schools**, classes of about 20 students (grades 6–8), with a 17-lesson curriculum I designed; I use LLMs and prompt engineering to produce the materials.
- Led the technical comparison of 3 vendors for the purchase of up to 250 computers (public procurement).

Concurrent: Event Photographer, Planaltina-GO City Hall (May 2025 – present) — Python/Pillow pipeline for image batches. **Previous:** Administrative Assistant (Jan 2024 – Apr 2025) — finance and inventory in Google Sheets.

PROJECTS

automacoes-n8n — Self-hosted n8n on Docker with 3 real workflows, exported and sanitized (credentials via \$env, no personal data): **Excel** → **WhatsApp**, a sub-workflow called by an AI agent as a *tool* that replies with text or a generated .xlsx; **daily briefing** (cron + API + WhatsApp); **note router** where Gemini classifies notes and the flow files them.

modulacao-sme — Python/pandas ETL for staffing data across a 46-unit network.

mobile-lads-backend — LADS — REST API for the college software lab's (LADS) mobile app: authentication, profiles and email password recovery, in Node.js, Express and TypeScript, with Prisma ORM, MySQL, migrations and seed. Named lead of one of the lab's development groups.

EDUCATION

B.Sc. in Information Systems — Faculdades Integradas IESGO, Formosa-GO, Brazil • 2024 – expected Jul 2028

CERTIFICATIONS • LANGUAGES

Cisco Networking Academy — Ethical Hacker (2026) • Google — AI Essentials and Prompting Essentials (2025) • Google Cybersecurity, 3 courses (Coursera, 2025–2026) • Google — Introduction to Git and GitHub (2025)

Languages: Portuguese (native) • English (intermediate, B1 — fluent technical reading)
